

#### First Section:

- Our goals from last week's third section were: Our plans are to continue to develop a view of a project/tasks and to start development on some other things that haven't been fully decided yet.

#### Second Section:

- The progress we did this week was to finish Project Milestone sprint 3. We worked on our zero diagram and one diagram to see what we were connecting things to. When doing the work last week I learned what we wanted to and researched the ways to do our data flow diagrams. I even laid out our models and associations where we will need to write an int or string for and the customizations built into our model. Including what we want to see in our final project. We also did backlog work.

- We finished a diagram 0 and 1
- We discussed features
- Plans for database done
- Data flows drawn out and pictured

#### Third Section:

- The goals we have for next week are:
  - To work on Project Milestone (Sprint 4)
  - Start to complete some of our backlog features
  - implement more features and talk to the team

#### Fourth Section:

- Agenda for next week's meeting with the INstructional Team:
  - Talking about goals
  - Talking about plans
  - Talking about technical aspects of how our model will work
